PHASE 01 • BROKER CONFIGURATION

Trading Account Setup at the Broker (JustMarkets / MT5)

Quantum Sniper is 100% broker-agnostic: it works seamlessly with JustMarkets, RoboForex, IC Markets, Exness, or any regulated broker offering MetaTrader 5 (MT5). The detailed procedure below covers JustMarkets (or equivalent).

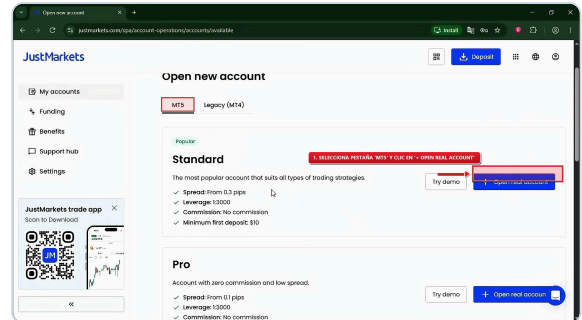

ACTION 1.1 ACCOUNT TYPE

Select MT5 Platform and Account Type

In your broker client portal, navigate to the trading accounts opening section:

- ✓ Make sure to select the top MT5 tab (MetaTrader 5).
- ✓ In the Standard category (or Pro / Cent), click the blue 'Open real account' button.

💡 **Recommendation:** Standard accounts offer low spreads from 0.3 pips with zero commission per lot.

STEP 1 MT5 tab and click '+' Open real account'.

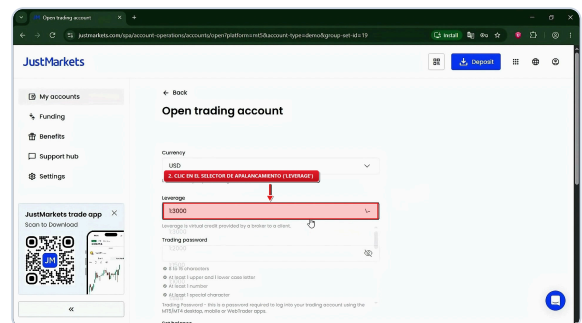

ACTION 1.2 CURRENCY & SELECTOR

Choose Base Currency (USD) and Open Leverage Selector

On the new trading account configuration screen:

- ✓ Verify that the base currency is selected as USD.
- ✓ Click the dropdown menu in the Leverage field to view available options.

🛡️ **Golden Rule:** A USD account avoids currency conversion costs during weekly withdrawals.

STEP 2 Open the leverage dropdown selector in your account.

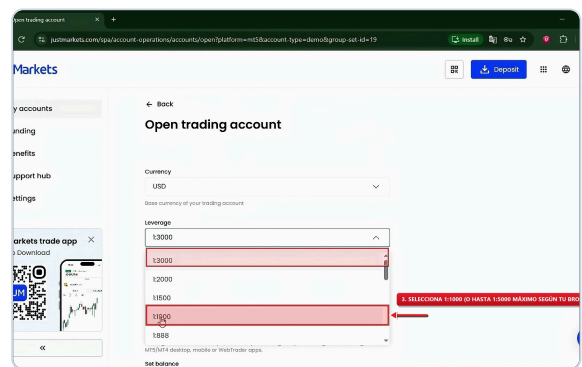

ACTION 1.3 LEVERAGE

Select Recommended Leverage: 1:1000 (Up to 1:5000 Max)

Leverage is crucial for the mathematical hedging and floating drawdown calculation:

- ✓ Set leverage to 1:1000 as the minimum recommended standard to operate Quantum Sniper.
- ✓ If your broker allows it (such as JustMarkets offering 1:2000, 1:3000, or up to 1:5000), you may select the highest available value.
- ✓ Ultra-high leverage (1:1000 to 1:5000) reduces margin retention to minimal fractions (under \$0.20 USD per 0.01 micro-lot), granting superior mathematical shielding.

⚠️ **Critical Notice:** Never use low leverage (1:30 or 1:100), as it suffocates margin and halts trading.

STEP 3 Select recommended 1:1000 leverage (up to 1:5000 max).

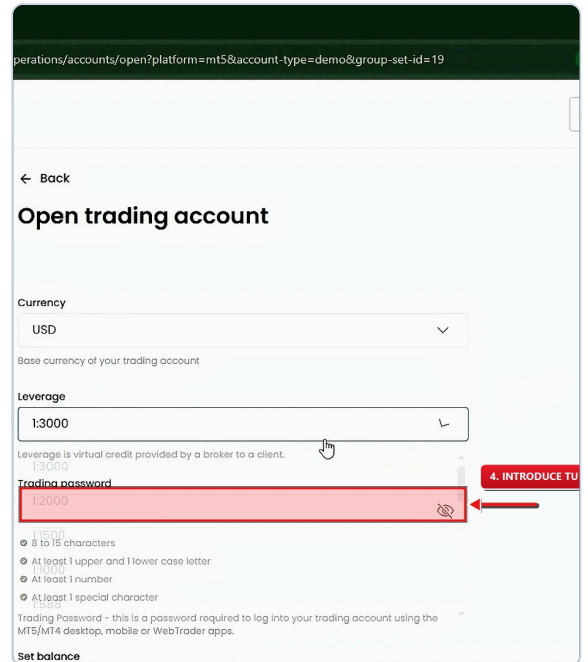

Final step of account opening at the broker. Make sure to securely record your live credentials before proceeding to terminal setup.

ACTION 1.4 CREATE ACCOUNT**Define Trading Password and Save Credentials**

Final registration step at the broker:

- ✓ Enter a secure password in the Trading password field.
- ✓ Click the green 'Create account' button.
- ✓ Record your 3 key details: Account Number (Login), Password, and Server Name (e.g., JustMarkets-Live).

 **Save your credentials:** These 3 data points are what you will use to log into MT5 in the following phase.

operations/accounts/open?platform=mt5&account-type=demo&group-set-id=19

8 to 16 characters
At least 1 upper and 1 lower case letter
At least 1 number
At least 1 special character

Trading Password - this is a password required to log into your trading account using the MT5/MT4 desktop, mobile or WebTrader apps.

Set balance

4. INTRODUCE TU

STEP 4 Define password and click 'Create account'.

Broker Synchronization & Connection in MetaTrader 5 (MT5)

To connect your broker account (JustMarkets or any other broker) with MetaTrader 5, you must first register and link the broker server via MT5's 'Open an Account' wizard. Follow these exact visual actions:

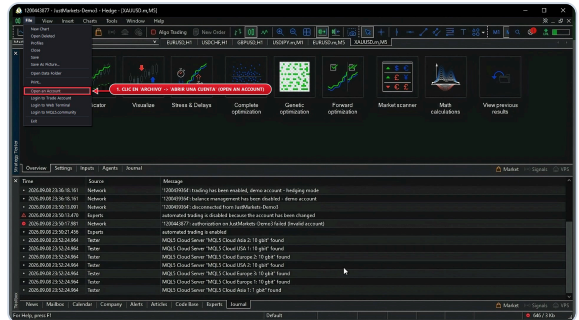

ACTION 2.1 FILE MENU

Click 'File' → 'Open an Account'

In the top navigation bar of MetaTrader 5:

- ✓ Locate the File menu in the upper-left corner of MT5.
- ✓ In the dropdown menu, click Open an Account. This wizard is required to locate broker servers like JustMarkets that are not preloaded.

Key Step: This wizard allows you to add and synchronize servers from any global broker to your MT5 terminal.

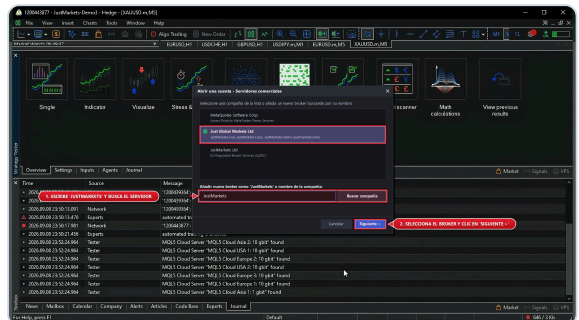

STEP 1 File Menu → 'Open an Account' to add broker server.

ACTION 2.2 SEARCH BROKER

Type 'JustMarkets' in Search and Select Broker

In the 'Open an Account - Trading Servers' wizard window:

- ✓ In the lower search box, type JustMarkets (or your broker's name).
- ✓ Click Find your company (or press Enter on your keyboard).
- ✓ In the list of found servers, click to select Just Global Markets Ltd (JustMarkets-Live and Demo).
- ✓ Click the blue Next > button.

STEP 2 Type 'JustMarkets', select 'Just Global Markets Ltd', click 'Next'.

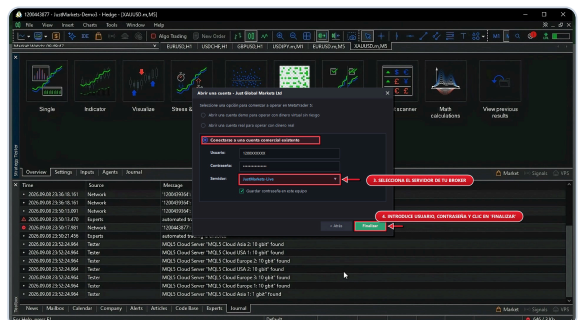

ACTION 2.3 CONNECT ACCOUNT

Connect to Existing Account and Select Server

On the second screen of the account wizard:

- ✓ Select Connect with an existing trade account (third radio button).
- ✓ Login: Enter your account number assigned by your broker (e.g., 1200XXXXXX).
- ✓ Password: Enter the trading password created in Step 1.4.
- ✓ Server: Select your live broker server (e.g., JustMarkets-Live).
- ✓ Check Save password and click Finish.

Complete Synchronization: From this moment on, the server remains permanently saved in MT5.

STEP 3 Enter Login, Password, server 'JustMarkets-Live' and click 'Finish'.

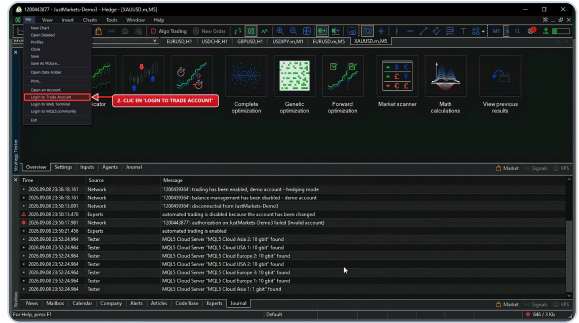

Direct Quick Access & Active Connection Verification

Once the server is stored, future logins are instantaneous. Confirming that your ping is active and green ensures your terminal is ready.

ACTION 2.4 QUICK ACCESS**Alternative Method: 'Login to Trade Account'**

To log in on a daily basis once the broker server is already linked:

- ✓ Click the top menu File → Login to Trade Account.
- ✓ In this direct dialog box, your server (e.g., JustMarkets-Live) will now appear ready in the dropdown.
- ✓ Enter your credentials and click OK.

STEP 4 Direct quick access: File → Login to Trade Account.

ACTION 2.5 VERIFICATION**Verify Active Connection and Green Ping in MT5**

Real-time link confirmation with broker servers:

- ✓ Look at the bottom-right corner of your MetaTrader 5 screen.
- ✓ It must display signal bars in green/blue with data transfer speeds (e.g., 14/22 kb) and latency in milliseconds (ping).

✓ **Connection Successful:** If you see transfer speeds and active ping, your MT5 is ready to receive orders.

STEP 5 Green signal bars and active ping in bottom corner.

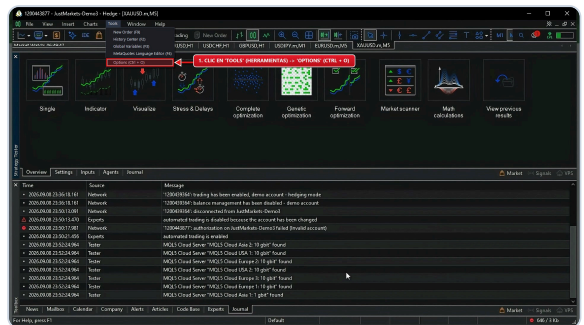

Enabling Algorithmic Trading and WebRequest in MT5

For the receiver EA to communicate at 0 ms with Quantum Sniper servers and execute trades automatically, you must authorize network and trading permissions in MT5 settings:

ACTION 3.1 OPTIONS**Click 'Tools → Options' (Ctrl + O)**

Open central configuration panel:

- ✓ In the top menu, click Tools.
- ✓ Select Options (or press Ctrl + O).

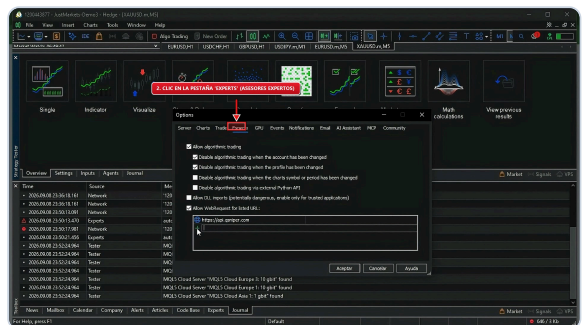

STEP 1 Click 'Tools' → 'Options' (Ctrl + O).

ACTION 3.2 EXPERTS TAB**Select the 'Expert Advisors' Tab**

Inside the Options dialog window:

- ✓ In top tab bar, click on Expert Advisors.

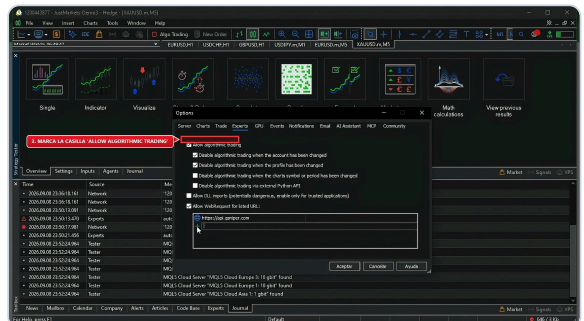

STEP 2 Click the 'Expert Advisors' tab.

ACTION 3.3 ALGO TRADING**Check 'Allow Algorithmic Trading'**

Enabling automatic execution:

- ✓ Check the primary checkbox Allow algorithmic trading.

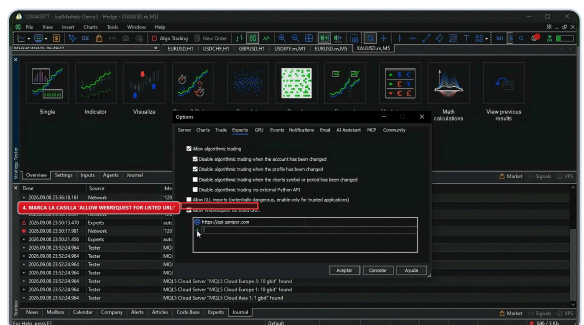

STEP 3 Check 'Allow algorithmic trading' box.

ACTION 3.4 WEBREQUEST**Check 'Allow WebRequest for listed URL'**

Authorizing real-time HTTP requests:

- ✓ At bottom, check Allow WebRequest for listed URL.

STEP 4 Check 'Allow WebRequest for listed URL'.

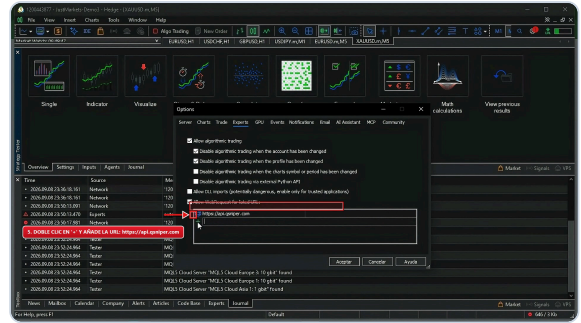

Quantum Cloud URL Authorization & Saving Settings

Registering the official Quantum Sniper API endpoint ensures your terminal can exchange institutional execution signals without interference.

ACTION 3.5 ADD URL**Click '+' Icon and Add URL 'https://api.qsniper.com'**

Secure link with the quantum intelligence cloud:

- ✓ Double-click on the green + icon (or add new URL).
- ✓ Type or paste exactly: `https://api.qsniper.com`
- ✓ Press Enter key to confirm URL in the list.

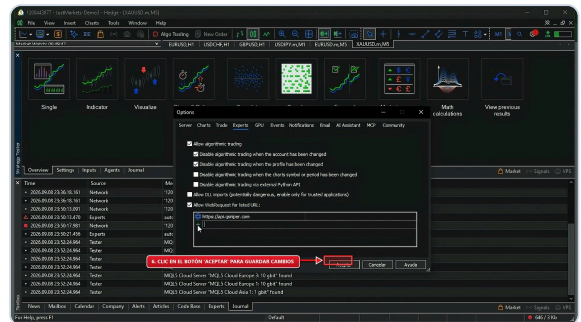

STEP 5 Click '+' and enter `https://api.qsniper.com`.

ACTION 3.6 SAVE**Click 'OK' to Save Permissions**

Applying configuration:

- ✓ Click the OK button in bottom-right corner.
- ✓ Permissions will remain permanently saved in your MT5.

Settings Saved: All algorithmic trading permissions and WebRequest routes are now locked in.

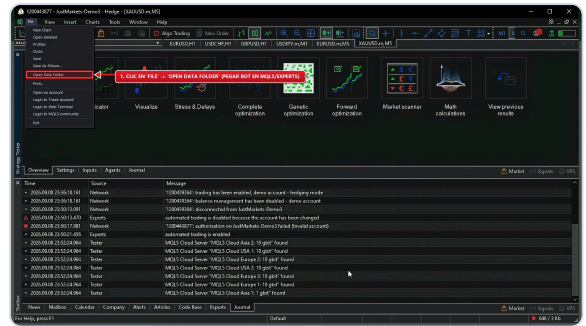

STEP 6 Click 'OK' to save all changes.

The Quantum_Receiver.ex5 file is an ultralight bridge (50 KB) placed in your MT5 to execute institutional orders dispatched by the cloud:

ACTION 4.1 DATA FOLDER

Open Data Folder and Paste Quantum_Receiver.ex5

- ✓ In MT5, go to: File → Open Data Folder.
- ✓ Navigate to folder: MQL5 → Experts.
- ✓ Paste Quantum_Receiver.ex5 there (downloaded from the App).

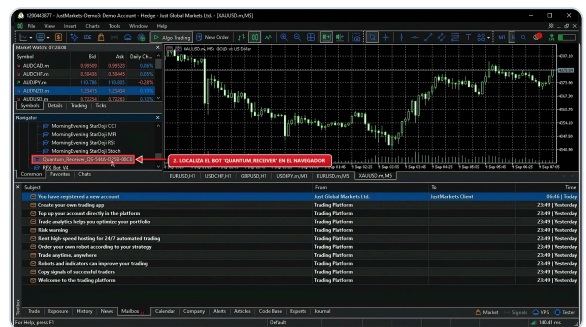

STEP 1 File → Open Data Folder → MQL5 → Experts.

ACTION 4.2 NAVIGATOR

Locate Quantum_Receiver in MT5 Navigator

- ✓ Open Navigator window (press Ctrl + N).
- ✓ Right-click on Expert Advisors and select Refresh.
- ✓ You will see Quantum_Receiver appear in the list.

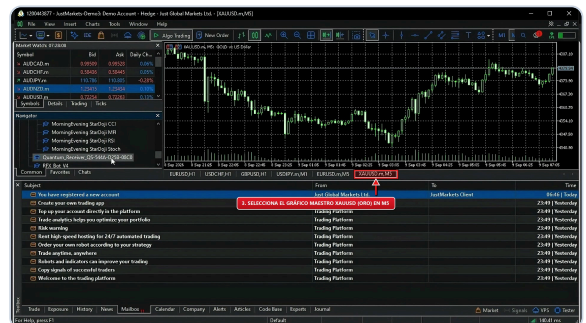

STEP 2 Refresh Navigator and verify Quantum_Receiver.

ACTION 4.3 OFFICIAL CHART

Open Gold (XAUUSD) or EURUSD on M1 or M5

- ✓ In Market Watch, right-click on XAUUSD (Gold) or EURUSD.
- ✓ Select Chart Window.
- ✓ Set chart timeframe to M1 (1 Minute) or M5 (5 Minutes).

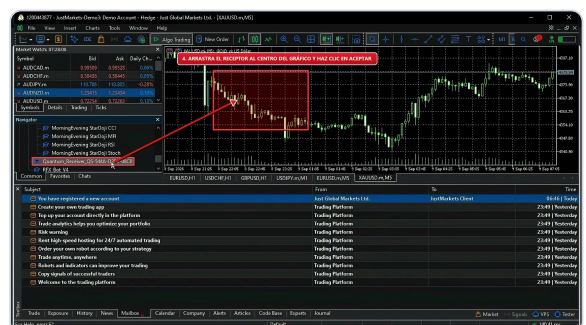

STEP 3 Open XAUUSD or EURUSD chart on M1 / M5.

ACTION 4.4 DRAG EA

Drag Quantum_Receiver onto Chart

- ✓ Click and hold Quantum_Receiver and drag it onto chart.
- ✓ In Common tab, verify Allow Algorithmic Trading is checked.
- ✓ Click OK.

STEP 4 Drag Quantum_Receiver and drop onto chart.

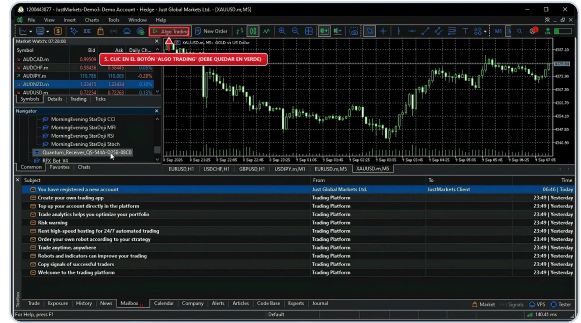

Master Switch Activation & Live HUD Verification

Enabling Algo Trading in MT5 unlocks automated execution. The Quantum HUD on the chart confirms real-time communication with the cloud.

ACTION 4.5 ALGO TRADING**Turn Master 'Algo Trading' Button Green**

Master execution switch in MT5:

- ✓ On the top toolbar, click the Algo Trading button.
- ✓ The button icon must switch from red to green with a play triangle.

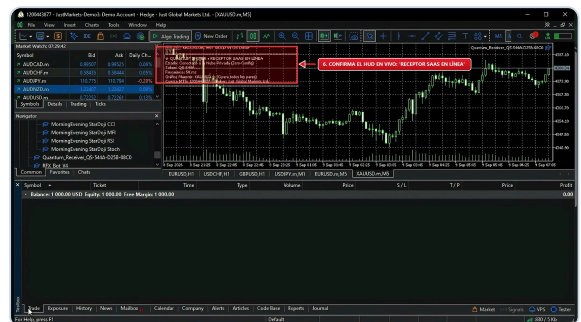

STEP 5 'Algo Trading' button turned green.

ACTION 4.6 ACTIVE HUD**Verify Active Quantum Sniper Chart HUD**

Visual confirmation of operation:

- ✓ On the chart, the live Quantum HUD will appear with a smiling icon or cloud link badge in top-right corner.
- ✓ Your MT5 terminal is now 100% ready and cloud-linked with your App.

STEP 6 Active HUD panel on chart linked to cloud.

⚡ **0 ms Latency:** Real-time signal receiver is online and listening for institutional orders.

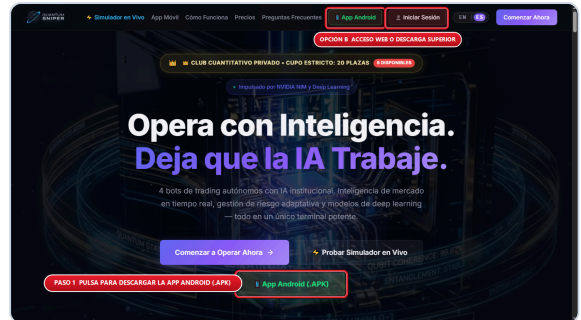

Quantum Sniper App Download from www.qsniper.com

All algorithm controls, profit monitoring, and risk management are handled directly from the Quantum Sniper App (Android Mobile or Web for PC/iPhone):

ACTION 5.1 WEB PORTAL**Visit www.qsniper.com and Tap 'Android App (.APK)'**

Access official Quantum Sniper portal:

- ✓ Open your browser on mobile or PC and go to: www.qsniper.com.
- ✓ On main page, tap green 'Android App (.APK)' button.
- ✓ Web Alternative (PC or iPhone): Click 'Login' or go directly to app.qsniper.com.

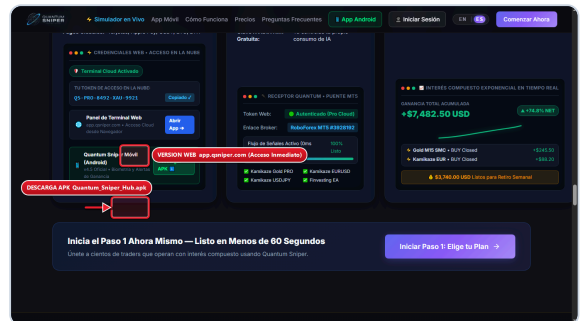

STEP 1 'Android App (.APK)' button and Login access.

ACTION 5.2 APK INSTALLER**Direct Download Options and Installation**

Installing official mobile application:

- ✓ In download section, tap 'Download APK (Quantum_Sniper_Hub.apk)'.
- ✓ Open file on your Android device and authorize installation.

STEP 2 Download APK Quantum_Sniper_Hub.apk and web terminal.

Cross-Platform: Use Android APK on mobile or web portal app.qsniper.com on PC/Mac/iPhone.

Upon launching the Quantum Sniper App, the cloud security system will request your private License Key:

ACTION 6.1 LICENSE FIELD**Locate Activation Field in the App**

Secure initial authentication screen:

- ✓ Open mobile app or visit app.qsniper.com.
- ✓ Locate the central input box with format QS-PRO-XXXX-XXXX.

 **Personal Key:** Enter the license key delivered to your official purchase email.

STEP 1 Initial Activation screen in Mobile App.

ACTION 6.2 ACTIVATE ACCESS**Enter Key and Tap ' ACTIVATE LICENSE'**

Instant cloud validation:

- ✓ Enter your private license key in the field.
- ✓ Click the blue '  ACTIVATE LICENSE' button.
- ✓ System authenticates permissions in milliseconds and opens operations hub.

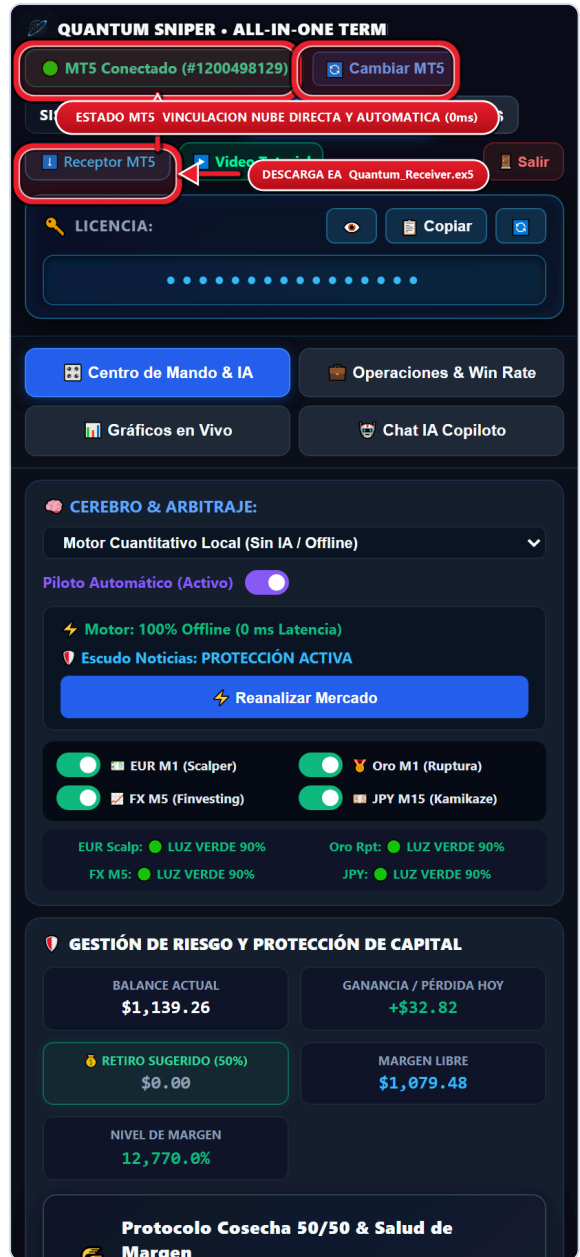

Once inside the mobile dashboard, verify synchronization with your MT5 account and enable the 4 high-frequency algorithms:

ACTION 7.1 MT5 LINK**Confirm ' MT5 Connected' Badge and EA Download**

Immediate cloud sync at 0 ms:

- ✓ In the top header, verify green badge: MT5 Connected (#YourAccount).
- ✓ If you had not yet downloaded the receiver EA, tap 'MT5 Receiver' to download Quantum_Receiver.ex5 in 1 click.
- ✓ To switch trading accounts in the future, tap adjacent button ' Switch MT5'.

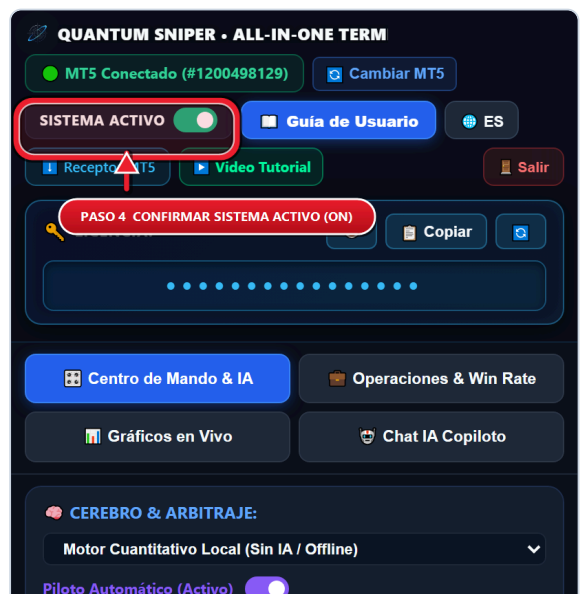

STATUS MT5 Connected badge and MT5 Receiver button.

ACTION 7.2 ACTIVATE BOTS**Switch 'SYSTEM ACTIVE' to ON and Verify 4 Bots**

Deploying the 4 uncorrelated algorithms:

- ✓ Turn on master switch: SYSTEM ACTIVE (ON).
- ✓ Verify all 4 official bots are on GREEN LIGHT 90%:

Bot Name	Symbol	Strategy	Status
EURUSD	EURUSD M1	Scalper micro-trends	GREEN LIGHT
Gold PRO	XAUUSD M1	Breakout institutional	GREEN LIGHT
Finvesting FX	FX M5	Macroeconomic filter	GREEN LIGHT
USDJPY	USDJPY M15	Mean reversion	GREEN LIGHT

Professional consistency is built on ruthless balance protection and disciplined withdrawal of real profits to your bank:

ACTION 8.1 50/50 HARVEST**Balance Telemetry and the 50/50 Harvest Protocol**

- ✓ Current Balance: Net deposited capital plus closed profits.
- ✓ Profit Today: Net performance accumulated during the trading session.
- ✓ Sentinel Brake: If free margin drops below 200%, system automatically halts new positions.

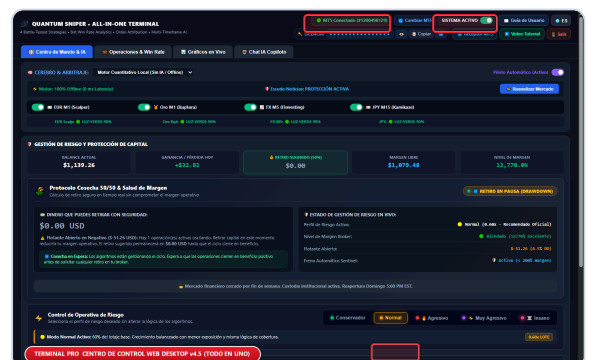

📅 **50/50 Golden Rule:** Every Friday at 15:30, withdraw 50% of profits to your bank and leave 50% for compounding.

TELEMETRY

Balance, free margin and safe withdrawal diagnostics.

ACTION 8.2 DESKTOP TERMINAL**Panoramic Web Command Center (app.qsniper.com)**

- ✓ Professional All-in-One interface with 4 interactive tabs.
- ✓ Risk Profile Selector: Conservative, Normal (0.60x), or Aggressive.
- ✓ Integrated News Shield filter (pauses 30 min before/after NFP/CPI releases).

**PC VIEW**

Panoramic desktop terminal with risk profile selector.

ACTION 8.3 WIN RATE 100%**Trades Tab and Win Rate Audit**

- ✓ Audited statistics per algorithm (with verified historical rates up to 100.0% Win Rate).

The 5 Sacred Commandments of the Quantum Trader

99% of losses in algorithmic trading result from unwarranted emotional interference. Follow these 5 inviolable rules:

⚠ COMMANDMENT 1: NEVER open manual trades on the same account running the robot.

Opening manual orders saturates margin and throws off the automated hedging algorithm. If you wish to trade manually, open a separate secondary account with your broker.

✗ COMMANDMENT 2: NEVER switch to 'Aggressive' or 'Insane' modes out of euphoria after winning days.

Greed destroys accounts. Keep your risk profile in Normal Mode (0.60x) or Conservative. Week-by-week consistency powered by compound interest is the true path.

⚠ COMMANDMENT 3: DO NOT close trades in floating drawdown out of impatience or panic.

Robots calculate interbank liquidity zones and dynamic Trailing Stops. Manually closing floating orders crystallizes temporary drawdowns that the algorithm is designed to recover.

✗ COMMANDMENT 4: Set recommended leverage of 1:1000 (up to 1:5000 maximum).

Low leverage (1:30 or 1:100) locks excessive margin on every micro-lot, choking the account during natural market swings. With 1:1000 to 1:5000, margin retention drops below \$0.20 USD per trade, granting maximum protection and mathematical room to breathe.

✗ COMMANDMENT 5: NEVER shut down your computer or MT5 during the trading week.

If using a personal computer, keep it powered on with MT5 running. The optimal solution is hosting your MT5 on a Virtual Cloud Server (VPS) operating 24 hours a day, 5 days a week.

Everything you need to know regarding session performance, account withdrawals, and direct engineering support:

What happens if the system experiences a negative day?

It is completely normal in financial markets. No trading system wins 100% of days. Quantum Sniper's mathematical edge lies in winning days heavily outweighing losing days (Win Rate above 85% - 90%) and losing trades being strictly capped with controlled Stop Loss.

Can I withdraw my funds from the broker at any time?

Yes, your capital always remains in your personal broker account under your legal name. It is recommended to request withdrawals when there are no floating open positions (ideally on Friday afternoons following session close at 15:30).

How do I contact the institutional support team?

You can reach out directly via the www.qsniper.com portal or send an email with your private license key to support@qsniper.com.
